Summary

Software Development Engineer with 8+ months of experience in building scalable full-stack applications using Python (Django, Flask) and modern frontend frameworks like Angular and React. Experienced in designing RESTful APIs, system integration, and enterprise web applications with a focus on performance, security, and reliability. Strong background in AI/ML-based systems including NLP, YOLO-based object detection, and medical image analysis using deep learning models. Skilled in database design, backend architecture, and end-to-end system development across web and embedded domains.

Experience

Mitsogo Technologies Pvt Ltd (Hexnode)

(July 2025 – March 2026)

Software Engineer

Kochi, Kerala

- Developed and maintained scalable full-stack features for the Hexnode Unified Endpoint Management (UEM) Portal using Django (Backend) and Angular (Frontend).
- Built and integrated secure RESTful APIs for device management, authentication, and portal operations, ensuring seamless communication between frontend and backend systems.
- Implemented core portal modules including user management, access control, and security enhancements, improving system reliability and performance.
- Collaborated in an Agile development environment with cross-functional teams to deliver production-ready features within strict deadlines and enterprise-grade standards.

Projects

AI-Powered Resume Screening System | Python, Flask, NLP, PDF Processing, PostgreSQL

(March 2026 – April 2026)

 Live Demo: <https://ats-resume-analyzer-dp6l.onrender.com>

- Built a Flask-based ATS platform that extracts and analyzes resumes (PDF/DOCX) using PyPDF2 and python-docx for automated text processing.
- Designed an NLP-driven scoring engine using keyword matching and regex to evaluate resume sections such as skills, experience, education, and projects.
- Developed a dynamic job role recommendation system with weighted scoring, section-wise analysis, and personalized feedback for resume improvement.

Oral Cancer Detection System using CNN-Based Image Processing | MATLAB, LSTM, CNN,

SqueezeNet, ResNet50, Image Processing

(December 2024 - February 2025)

 GitHub: <https://github.com/Arun-21BEECE006/Oral-Cancer-using-LSTM-Full-Code>

- Developed a MATLAB-based oral cancer detection system using deep learning models (ResNet50 and SqueezeNet) for binary classification of medical images.
- Applied image preprocessing techniques including resizing, grayscale conversion, Gaussian filtering, and normalization to enhance input X-ray/image quality.
- Implemented CNN-based feature extraction with class activation mapping (CAM) and evaluated performance using sensitivity, specificity, and F-score metrics.

Smart Portfolio Contact Automation System with Email & Notification Engine | React.js, Node.js,

Express.js, Nodemailer

(May 2024 – August 2024)

 Live Demo: <https://arun-portfolio-chi.vercel.app>

- Developed a full-stack portfolio website with React.js frontend and Node.js/Express backend to handle real-time user inquiries through a contact form.
- Implemented secure email automation using Nodemailer SMTP integration to send structured inquiry emails and automated thank-you responses.

Alcohol Detection and Accident Prevention System with SMS Alert | Arduino UNO, GSM Module, GPS Module, MQ-4 Sensor
(December 2023 - February 2024)

 **GitHub:** <https://github.com/Arun-21BEECE006/alcohol-detection-project>

- Developed an Arduino-based alcohol detection system using MQ-4 sensor to identify intoxication levels.
- Integrated GSM and GPS modules to send SMS alerts with live location to predefined contacts upon detecting drunk driving conditions.
- Implemented automated safety response using buzzer alerts and motor speed control to prevent vehicle operation during alcohol detection.

AI-Powered Real-Time Object Detection Web System | Python, Flask, NumPy, TensorFlow, YOLOV8
(March 2023 – April 2023)

- Implemented YOLOv8 inference pipeline using OpenCV for object localization, confidence scoring, and annotated visual output generation.
- Designed an end-to-end image processing workflow for uploading images and returning detection results through a web interface.

Skills	Achievements
• Frontend: HTML, CSS, JavaScript, React, Angular • Backend: Django, Flask, Node.js • Languages: C, C++, Java, Python • AI/ML: Yolo, NLP, TensorFlow • Database: SQL, MongoDB, PostgreSQL, MySQL • Tools: Git, Postman, Eclipse	• Won First Place in All India Neo Codeathon – February Edition; awarded a smartwatch and certificate for outstanding performance. • Secured First Rank in II Semester and received Certificate of Appreciation. • Secured First Rank in III Semester and received Certificate of Appreciation

Internships

Motion Cut (AICTE Internship)

(November 2023 – December 2023)

Web Development

- Developed responsive web applications using HTML, CSS, and JavaScript, focusing on user-friendly UI design and interactive components.
- Built functional business websites and e-commerce interfaces with form validation and responsive layouts across device.

Emglitz Technologies

(May 2023 – June 2023)

Embedded C

Coimbatore

- Developed embedded system applications using **Embedded C**, focusing on microcontroller-based programming and hardware interaction.
- Implemented real-time embedded logic for sensor-based systems, strengthening hardware–software integration skills.

Sevael Technologies Private Limited

(July 2022 – August 2022)

Very Large-Scale Industry (VLSI)

Chennai

- Worked on VLSI design workflows using industry-standard EDA tools, focusing on digital circuit design and verification.
- Gained hands-on experience in integrated circuit design concepts and semiconductor technology fundamentals.

Education

B.E Electronics and Communication Engineering

Karpagam Academy of Higher Education, Coimbatore

(2021 – 2025)

CGPA 9.43

HSC

S.H.N.V Higher Secondary School, Sivakasi

(2020 – 2021)

Percentage 87

SSLC

S.H.N.V Higher Secondary School, Sivakasi

(2018 – 2019)

Percentage 79
